

Use An OpenAir SizeIT To Bridge Your IT Landscape

Are you realizing the cost savings potential in your IT by the use of OpenAir?

OpenAir is a part of your IT landscape providing business software to your organization using a SaaS model. Even though it is externally hosted, there is still the potential to impact your other IT operations.

During this 2 day engagement TOP Step's industry and technical experts work with your IT organization to identify an efficient OpenAir footprint and bridge the gaps in your IT landscape.

We will provide you with recommendations to help realize cost savings by assessing:

- ◆ Potential application integrations
- ◆ Redundant systems
- ◆ System Maintenance

Benefits of an OpenAir SizeIT

Reduce your IT footprint

Cost savings of IT operations

Efficient and consistent data entry by eliminating redundancy

Reduced data administration

OpenAir SizeIT Process

Stage 1: IT Landscape Walkabout

We start with a walkthrough with your IT organization of existing applications. For each application we review who uses the application, the maintenance involved for upkeep, and the business benefits realized by the application.

Stage 2: Streamline Session

Next, we compile a complete IT landscape and further investigate 4 main areas:

- ◆ Integrations
- ◆ System Replacement
- ◆ System Redundancy
- ◆ System Maintenance

Redundant data entry is a key starting point for streamlining your IT landscape. Integrations or even system replacement can reduce redundant data which in turn make end-users more productive with higher system and process adoption.

With new features introduced every 6-8 weeks, what may have been a restriction in the past may now prove viable allowing you to reduce your IT footprint by eliminating redundant applications.

The system maintenance performed by IT is reviewed for more efficient approaches leveraging TOP Step's best practices in system administration.

Stage 3: SizeIT ROI

The Size IT results in a cost/benefit report based on our ROI framework. We work with your team to determine the ROI for each area of improvement identified. The SizeIT report allows your company to decide how much or how little to implement.
